DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-13 and 17-26, drawn to an apparatus and method with a plurality of processing elements coupled to a plurality of communication registers, classified in class 711, subclass 109.
 - II. Claims 9-12, drawn to a plurality of image signal processors, random access memory and a plurality of communication registers, classified in class 382, subclasses 307 and 305.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as use without a particular random access memory. See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

Art Unit: 2189

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
